| Article Info | ABSTRACT |
|--|--|
| Keywords: Truth, size, criteria | The purpose of this research is to explain the basis of knowledge, the measurement of truth, the criteria for truth from Western and Islamic perspectives. The type of research used in this study is a literature study using descriptive analysis methods. This research was carried out by collecting various kinds of information and studying various kinds of literature related to the basic knowledge and criteria for truth from Islamic and Western perspectives. The results of this research show that the basic meaning of knowledge is that truth is something that is real and in accordance with facts and is relative. This means that what one person thinks is right, may not necessarily be what someone else thinks is right. The measure of truth can be proven by several theories including correspondence, correlation, phlegmatic, performative and consensus theories. From an Islamic perspective, religious truth theory, aql, siddiq. The criteria for truth in the Western perspective are epistemology, ontology and semantics and the criteria according to the Islamic perspective are the Koran and the hadith of the prophet Muhammad. |

INTRODUCTION

Almost all something in life can interpreted in various way. A fact can seen in a way different, leading to the conclusion will different truths, because man No have a sense of satisfaction will the truth that he found. As Muliadi explained in his book that, human No Once satisfied with what has been there is, but always look for the real truth, one the path taken is with ask. However, every answer Not yet Of course accepted so just because He must test it with method certain things that he knows.

As a result, the people man always look for truth throughout history and life. In the existence human, truth is otherworldly abilities. Truth is the only one things that can support man in consciousness and personality. The order levels truth is as following with consider room scope potential Subject : 1) Level of truth senses, namely very natural and earliest level felt human. 2) Level of truth scientific, which is achieved past processing ratio and experience senses. 3) For grow level truth philosophical based on reason and thought pure, reflection comprehensive become the more valuable. 4) Truth absolute origin from God Almighty as well to penetrate because people appreciate it truth, faith, and piety is highest religious truth. Truth philosophical No Once appear in One discourse. Regardless from perspective taken, truth always take Lots different forms.

RESEARCH METHODS

Types of research applied to the material This is type study studies literature with approach qualitative descriptive. Data collection in study This focuses on later writings processed become report study with form descriptive. Data collection techniques used in study This is Library research with read literature related with the discussion raised source research raised in the research This in journals, books and results study previously relevant.

RESULTS AND DISCUSSION

Basic Meaning of Truth

Truth is a noun that can bring something abstract or concrete. English to mention term truth with "*truth*" is loyalty. Or in Language Latin called "*variety*", and the Greek "*eletheid*" is antonym from the words "error", "falsehood", "mistake", and also opinion. While the word truth in Arabic it is called with "*al-haq*". Truth in Language Indonesia as written in dictionary big Indonesian has meaning a the corresponding phenomenon with fact or something really there is (Risal : 2023).

Knowledge is something that is known. On the other hand the method scientific is allow acquisition knowledge. Knowledge is amount all people's knowledge, concepts, and thoughts about the world and everything its contents, including people and how they undergo life they (Soelaiman : 2019).

According to Aristotle, truth is conformity between thoughts and reality. While according to Bertrand Russel, the truth is conformity between belief and reality. Truth in the Big Indonesian Dictionary is suitable condition (thing) with actual situation ; something that truly (really) exists (KBBI: 2024).

Based on the above understanding, the truth is something real and appropriate with factual and nature relative. It means what is considered somebody right, not yet of course other people think Correct. Truth scientific also interpreted as truth reason, which is produced through a long process research. Which in the research process the Lots procedures that must be followed passed by as well as standard stages that have been determined. This is also known as methodology. Abu Al-Huzail argued that reason is abilities possessed by humans For can accept existing knowledge, reason is also A the ability that allows man For differentiate himself with other objects. Objects captured by the five senses senses humans can too abstracted by reason (Shale: 2003).

In the Islamic view, reason is not brain as many allegedly, reason is Power thought that is owned human beings, the ability which in the Qur'an is called as something that is capable accommodate knowledge gained through method observe nature and environment around. Definition reason this is what then distinguished in Islam with something called as revelation brought by His messenger which contains truth true origin from God (Nasution: 1996).

So the truth scientific can defined as the truth that is between races with facts and reason which are deep to obtain a truth No only origin guess only, but through a process of stages method scientifically tailored to methodology, which means truth scientific nature logical as well as empirical and will still awake during Not yet There is truth new that can give proof truth against the previous one.human.

As for the foundation base in Knowledge Development covering a number of aspect base as following :

a. Reasoning

The act of thinking in accordance with patterns and logic certain with Meaning For produce knowledge called as reasoning. Reasoning intelligent own connotation plural, insightful area (Main: 2023).

Reasoning appear at the beginning civilization man That there is. Reason that makes man can think and reflect self and environment around him. Reasoning give birth to methods think in to obtain knowledge and something that is considered as truth. Reasoning is method think or method think based on framework flow certain For create knowledge (Nasution: 2016).

Remember definition reasoning previously, activities think considered reasoning If analytical and logical. In terms of this, every method reasoning own the logic yourself. Or, it is possible For interesting conclusion that activity reasoning is a process. of thinking logical. In the context of this, think logical must understood as activity think in accordance with pattern certain, or more special, logic certain.

b. Logic

Foundation logic is reliable inference. Because all element reasoning in logic proof based on the premise hypothesis certain, conclusion can stated as group, with every draft own group and its extent based on group. Logic study is studies about principles a guide that defines sound reasoning. A person expected can apply principles reasoning after learn logic to be able to interesting correct conclusion (Muliadi: 2020).

So that here We can say that logic is is A method thinking that comes in reason or logical. In addition, logic This can We hook up with method think objectively and emotionally, so that make logic This as base from knowledge.

c. Source Knowledge

Skepticism man to all symptom natural universe is source knowledge in this world. Accepting the world around they No Enough for humans, including his fate himself. "De omnibus dicitandum," as he once Rene Descarte said, it means all something must questioned. Among source knowledge that is :

- 1) Rational, In language English is rationalism is origin from he said. The basic word ratio originally in the language Latin meaning reason. He considered adhere to idea that reason must play role main in explain something. He emphasize reason (ratio) as source main knowledge, free from observation sensory (detached from him), and is in front of. or more Good from the others. All knowledge scientific fulfil condition only through reasoned learning. Knowledge based on reason only strengthened by experience.
- 2) Intuition, Can So source science. Because with intuition, people can with fast learn something without think about it. For example, Henry Bergson, has the view that intuition is product from evolution personal, thoughts highest. Another view is that understanding based on logic and analysis critical, empirical and rational No Enough.

- 3) Revelation also known as as source knowledge, identical with religion or trust mystical or metaphysical. Knowledge originate from God and revealed by His chosen servants (Prophets and Apostles). Man Study about various knowledge that is not can reachable and accessible through revelation or religion.
- 4) Authority, Authority is strength true, claimed by a individual and felt by the group. We accept that knowledge That accurate No because we have verify it in a way independent, but Because has guaranteed by the authorities field authorized and entitled sources (Suyomukti : 2011).

Size Truth

According to the Big Indonesian Dictionary (KBBI) size is a gauge or proper, appropriate ; as it should be. The meaning of the word truth is according to KBBI is in accordance as there is, no heavy side, straight heart, and can trusted. Basically, the size truth perspective philosophy knowledge can differentiated become three. First, the truth epistemology or often called with truth logical. Truth This can seen If there is conformity from subject (observer) with object (observed). Second, truth ontological or truth related essence with nature or characteristic base a object. For example, a stone is said to be hard is truth Because of course characteristic basically or in a way the nature of stone is true hard. Third, the truth semantics is the truth inherent in speech and language humans (Aziz: 2011).

That is, the truth from A sentence or spoken words who knows in accordance with epistemology and also ontology. For example, the language used For disclose all something. There is a number of theory about truth in philosophy science. However, at least There are five most common ones mentioned ;

- a. Correspondence theory states that that truth is correspondence between statements and objects from statement This theory. often associated with theories empirical knowledge (Atabik : 2014). Example theory correspondence that is If it is said chicken dead and after observed chicken dead, then statement called true and if on the contrary so statement considered wrong;
- b. Coherence theory state that truth is conformity between statement with other statements that have been more formerly considered right. For considered true, theory This hinting existence consistency or No existence opposition contradiction with axiom (Aziz: 2019). For example, the axiom in mathematics explain that amount corner triangle If combined which is 180° . So if There is statement that amount corner triangle If combined which is 200° , then statement This considered No Correct ;
- c. Pragmatic theory that focuses on utility. This theory is theory that assumes a confirmed the truth If statement the Can valid, useful and satisfying (Dewi: 2022). As example, hell although No own proof empirical that Correct there is, still can called truth Because beneficial in reduce number crime ;
- d. Performative theory states that truth as A the actions that follow statement. So, something considered Correct If of course can implemented in Action. (Tamri : 2012). Example theory This that is If a promise will go home, then his promise considered as truth If he of course go home ;

- e. consensus theory states that that truth is something agreed upon by society or public as truth. Theory of truth consensus pioneered by Thomas Kuhn, a expert history knowledge knowledge (Mustafa: 2021). Example theory consensus that is If public agreed that the country is owned by the people so matter the is truth.

As for the size truth in perspective Islam is :

Islamic Theory

Truth true Can difficult For defined. Truth often interpreted by scientists from different perspectives. Here This is Islamic explanation about theory the truth, which will help We understand and expand knowledge about truth :

- a. Theory of Truth Religious (Religion as a theory truth)

God is source revelation according to theory religious truth. Human as creature truth can look for truth through considered Correct all over truth. Truth can found in the Bible and religious hadith, which can be offer solution For all problem human. In theory This so seated with truth is all something that originates from Allah subhanahu wa ta'ala wata'ala. which is given through revelation conveyed by his messenger the Prophet Muhammad sallallahu ' alaihi wasallam. and become handle life human beings, which are composed of in the Quran and Hadith.

- b. Theory of *Al' Aql* (Reason)

Islam is a religion of reason. This statement strengthened by the Qur'an al-Karim, hadith, ijma' and the perception of scholars all over civilization. In the Qur'an the word *Al' aql* mentioned 49 times in forms *reflection* (24), *ya'qilun* (22), then *aqaluh*, *na'qilu*, *ya'qiluha*. All this verbal form refers to the action thinking. Reason is the foundation on which the cycle Islamic thought and its structure built. In science rational and scientific textual-rational, in explicit stated as principle (Hanafi: 2015).

Man blessed with ability For understand symbol, object abstract, analyze, compare, and draw conclusions conclusion through potential sense. As a result, they are in the end can selecting, sorting and differentiating what is appropriate, what is terrible, and what is good and bad, and decide whether will accept or reject something. Human can make something through God's material that has been there is, its form Good in the form of object or No objects, such as values, norms, ethics and rules the possible goodness realize a civilization, because Power reason push man For develop creativity, innovation, and ability do it (Yunus:2015).

In theory This, Islam teaches We For always use reason and mind in look for truth, so that will obtained scientific truth. For example, the Prophet forbade We drink with standing, it turns out after investigated with reason, we find things dangerous that can happen when We drink with standing. In addition, the Quran forbids We For eat animal pigs, and after investigated cooked content the meat own harmful bacteria for man when consume it. c.

Shiddiq Theory

Al- Shiddiqiyah (truth), namely with know truth through knowledge sure, ainul sure and true sure (Yunus:2015).

This theory is continuation from theory the previous truth of Islam, namely ' believing ' us believe what Allah explained in the Quran and us believe what was conveyed by His messenger, namely the Prophet Muhammad *sallallaahu ' alaihi wa sallam wasallam*. From the theory This We taught For believe truth based on criteria truth in Islam, and if believe the truth to someone must be a person who is trusted own credibility that is qualified and correct has tested its quality. As Abu Bakar was able to believe journey in last night what the Prophet *sallallaahu ' alaihi did Peace be upon you*.

Criteria Truth

Criteria truth Western perspective

How to collect as well as analyze Western truth uses : First, the framework logically organized with Good with argument consistent strong with knowledge previously. Second, give description hypothesis that originates from framework that. Third, hypothesis testing For determine whether statement That accurate. With exercise, wake up simple relationship For demonstrated and evaluated between subject and object. Through method inductive, experience, object, and conclusion furthermore produce truth.

vIn its criteria truth shared become : 1) epistemology, namely about knowledge ; 2) ontology, namely about something that has been There is or has maintained ; 3) Semantics, namely truth about language and speech / ethics ; 4) Religion, related with the knowledge contained in every religious teachings. (Mustajab: 2019).

a) Epistemology

Epistemology or philosophy knowledge is branch philosophy that studies and tries determine nature and scope knowledge, assumptions basically, and accountability on statement about knowledge possessed (Kenneth: 1994).

In the period beginning tradition Greek philosophy, epistemology Not yet become attention main philosophers, studies they more nature ontological. Philosophers in this era Still focused on dimensions ontological with to question which one true reality, the physical world as believed by the proponents materialism or dimensions metaphysical as advocated by idealists. Only later in Kant's time, attention man start shift from question ontological about What That reality to more direction epistemological with to question How knowledge about reality Can accessible by humans.

At first, the discussion in epistemology more focused on sources knowledge (the origin of knowledge) and theory about truth (the theory of truth) knowledge. The first discussion related with a question whether knowledge That based on reason thought solely (' intellectual), experience senses (*tajribiyyah*), criticism (*naqdiyyah*) or intuition (*hadasiiyyah*). Temporary that, the second discussion focused on questions what is the " truth " of knowledge That can depicted with pattern correspondence, coherence or practical-pragmatic. Next, the discussion in epistemology experience development, namely the discussion focused on sources knowledge, processes and methods For to obtain knowledge, method For prove truth knowledge, and levels truth knowledge.

Hendrik Rapar, said that type knowledge That shared three (Hendrik:2002).

Meanwhile, Burhanuddin Salam, as quoted by Amsal Bakhtiar type knowledge There is four, namely :

First, knowledge normal. Deep knowledge philosophy it is said as common sense, and often interpreted as good sense, because somebody own something where he is accept in a way good. Everyone says color This white Because of course That red. The water hot Because of course heated with fire. Food Can to satisfy hunger, etc. Common sense obtained from experience daily.

Second, knowledge science (science). Is knowledge that is obtained past use methods more scientific ensure certainty the truth. Science in essence is business For organize common sense, a knowledge that comes from from experience and observation in life everyday. However, it was continued with a thinking in a way careful and thorough with use various method.

Third, knowledge philosophy. Obtained past thinking rational based on understanding, speculation, judgment critical and interpretation. Knowledge philosophy more emphasizes universality and depth study about something. If knowledge only on one field narrow and rigid knowledge, philosophy discuss something more broad and deep. Philosophy usually give reflective and critical knowledge, so the science that was stiff and tend to closed become loose return

Fourth, religious knowledge. Just knowledge obtained from God through His messengers. Religious knowledge is absolute and mandatory believed by religious adherents. Knowledge contain a number of the main thing is, namely teachings about method relate with God, who is often called with connection in a way vertical (*hablun min Allah*), and the way relate with fellow human (*hablun min al- nas*). The most important religious knowledge is knowledge about God, besides That about belief (faith) and sharia (implementation) from belief). Knowledge This characteristic the truth is absolute Because originate from the word of God and the words of the Prophet *sallallaahu ' alaihi Peace be upon you*.

b) Ontology

Ontology is part the most common philosophy, or is part from metaphysics, and metaphysics is one of chapter from philosophy. Object review ontology is what exists No tied to one embodiment particular, ontology discuss about what is there universally, namely try looking for loaded core every the reality that encompasses all reality in all its form (Syafi : 2024).

After explore all field main in knowledge philosophy, such as philosophy humans, the natural world, knowledge, forestry, morals and social, then be arranged description ontology. So ontology is very difficult. understood If let go from parts and areas philosophy others. And ontology is field the most difficult philosophy. (Bakker: 1997).

Metaphysics talk about all something that is considered there is, questioning essence. essence This No can reached by five senses Because not formed, in form, in time and place. With learn essence We can to obtain knowledge and can answer question about What essence knowledge that. Reviewed from aspect ontology, science limit yourself in nature studies empirical (Suarjasumatri : 1991).

Objects reviewer knowledge covers all over aspect life that can tested by five senses human. In a way simple can it is said that things that have been is at outside range man No

discussed by science Because No can proven in a way methodological and empirical, whereas knowledge That have characteristics alone namely oriented towards the empirical world.

c) Semantics

The philosophers analysis Language to put forward criteria this, especially between they like Friederich Schleiermacher who was so strict using grammar. Understanding, according to Schleiermacher, is reconstruction that has begun with the expression expressed and returned settings psychological where he expressed moment grammatical and moment psychological are two moments that are mutually exclusive related and interacting (Wahana: 2016).

Supporters theory truth syntax, based on consistency grammar syntax statement or grammar. As a result, if A statement comply syntax standard, that own true value. In other words, the proposition No There is It means If No fulfil required conditions or No follow conditions. Philosopher analysis language, especially they are very strict using grammar, developing theory this (Muliadi: 2020).

Truth in semantic sense is available and innate reality in discourse and language (Rohana: 2021). According to theory syntax, a statement it is said Correct or worth Correct If in accordance with rules or syntax standard grammar. For example : ' I 'm leaving studying 12 noon ' I here is subject, depart is predicate, and 12 o'clock is information time.

Criteria Truth Islamic Perspective

Rasulullah *shallallahu 'alaihi peace be upon you* sent by Allah to convey things that are certain, consistent and firm, neither are the cases brought by the Apostle will Once misleading people human beings, who will happy when whoever can take guidance, and there are those who deny it being in Hell (Nasution: 1986).

For Muslims, correct speech is Of course sayings that follow the Koran, Sunnah and science. God after curse loud people talking without refer to to the Qur'an for guidance and knowledge. This is in accordance in Word of God:

(20) Mani ولا كتاب God willing message

"Don't you You take note Indeed Allah has to bow down for your (interest) what is in the heavens and what is on earth and perfect for you His blessings are physical and spiritual. and in between man some people deny about (the oneness of) Allah without knowledge knowledge or guidance and without a book to give illumination." (QS Luqman: 20).

(26) أراد الله بهذا مثلا يضل به كثيرا و يهدي به كثيرا وما يضل به إلا الفسقون God bless you God willing

"Indeed Allah is not disinclined make parable in the form of mosquito or more low from That. As for those who believe, they Certain that parable That Correct from their Lord, but those who disbelieve say : " What? God's intention to make This For parable ?" with parable That many people are led astray by Allah, and with parable There were (also) many people to whom He gave guidance. and no Allah leads no one astray except the wicked. " (QS Al-Baqarah: 26)

The verse above contain understanding that in every the parable that Allah made in the Qur'an already Of course own the meaning and purpose you want to achieve delivered. This is delivered by the believers, namely set everything that is right and practice it truth That.

In general In general the Qur'an reveals meaning truth in a way specific, meaning the first truth put forward must stated and established, reason not will Can deny existence. Obligation that's it as form resignation even in a way extreme is a coercion. This is what has ever happened revealed by al- Maraghi in his work tafsir al- Maraghi, something that rational That is God's decree. In his relationship with rational, truth Certain will related with reason, intellect and mind that knows it. Meaning the second truth is against from the word bathil. Truth in matter This seen in the discussion epistemological, so that if second the above associated, said haq is confirming, and news That Something that void (or No true) (Irawan: 20202).

View Islam or size truth in criteria truth refer to of course on belief to justice that comes from to the Qur'an. The essence is man obliged For always deliver himself to Allah. In the teachings of Islam, submission or servitude man to the creator named as worship, namely form devotion to God. Referring to one of scientist scientific, Ibn Sina has mention a number of criteria truth scientific consisting of on three thing. *First*, the relevance between truth and quality knowledge very close knowledge. Understanding somebody on A knowledge will influential to quality truth. *Second*, truth can obtained through abbreviation philosophy through analytical, speculative, critical and comprehensive. Even though levels truth in accordance with religious knowledge is certain need methodology thinking philosophy and this in accordance with current development. *Third*, the methodology used nudge close with truth. If the subject dominate, then truth worth subjective, but If the object is dominant, then truth will worth objective.

CONCLUSION

Truth is a noun that can bring something abstract or concrete. English to mention term truth with the «truth» that is loyalty. While the word truth in Arabic it is called with « al-haq ». Truth in Language Indonesia as written in dictionary big Indonesian has meaning a the corresponding phenomenon with fact or something really there is. Knowledge is something that is known. According to Aristotle, truth is conformity between thoughts and reality. While according to Bertrand Russel, the truth is conformity between belief and reality. Ratio is the basic word originally in the language Latin meaning reason. Second, the truth ontological or truth related essence with nature or characteristic base a object. Third, truth semantics is the truth inherent in speech and language human being. That is, truth. from A sentence or spoken words who knows in accordance with epistemology and also ontology. For example, the language used For disclose all something. The correspondence theory states that truth is correspondence between statements and objects from statement said. Coherence theory state that truth is conformity between statement with other statements that have been more formerly considered true. Pragmatic theory that focuses on utility. This theory is theory that assumes a confirmed the truth If statement the Can valid, useful and satisfying. The consensus theory states that that truth is something agreed upon by society or public.
